

Objectives

At the end of Week 3, the students will learn how to:

- 1.1. Use Photoshop for retouching images such as portrait enhancement and colorization of images from black and white.
- 1.2. Create a digital art and effects using painting tools
- 1.3. Identify the different concepts of typography and how to use them in design
- 1.4. Identify the fundamentals of graphic design

Use the text and vector tools to create social media infographics

Instructions

Visit these sites for the lessons on typography and photoshop.

1. PHOTOSHOP TOOLS. Instructions: Identify the tools group/category, name of tool and functions of each tool

Tool group / category		Name of Tool	Function
Move and Selection Tools		1. Move Tool	This tool lets you move layers, selections, and objects within the image. It's essential for arranging elements on your canvas.
		2. Rectangular Marquee Tool	Used to create rectangular and square selections. It's a fundamental tool for isolating areas of an image.
		3. Lasso Tools	A group of tools for making freeform selections. The standard Lasso Tool is for freehand drawing, the Polygonal Lasso is for straight-edged selections, and the Magnetic Lasso automatically snaps to edges.
		4. Object Selection Tool	This tool makes it easy to automatically select an object or a specific part of an object. You simply draw a rectangle or a lasso around it, and the software intelligently detects the object.
Crop and Slice Tools		5. Crop Tool	Used to trim or expand the boundaries of an image. It's perfect for removing unwanted edges or changing the composition of a photo
		6. Frame Tools	Creates a placeholder frame in a rectangular or elliptical shape. You can then drag and drop an image into this frame, and it will be automatically scaled to fit.
Measurement Tools		7. Eyedropper Tool	Used to sample colors from anywhere in the image. It changes your foreground color to match the color you click on.
Retouching and Painting Tools		8. Spot Healing Brush Tool	A powerful tool for removing blemishes, spots, and small imperfections from an image. It works by sampling nearby pixels to blend over the blemish.
		9. Brush Tool	The primary tool for painting and drawing on an image. You can adjust its size, shape, and opacity to create different effects.
		10. Clone Stamp Tool	This tool duplicates or "clones" a portion of an image to another area. You hold down the 'Alt' key to select a source point and then paint with a copy of that area.
		11. History Brush Tool	Allows you to paint a previous state of your image from the History panel. It's useful for selectively undoing specific edits.
		12. Eraser Tool	Used to erase pixels from a layer. The tool can be used with different brush types to create soft or hard edges.
		13. Gradient Tool	Creates a smooth blend between two or more colors. You can apply linear, radial, and other types of color transitions.

		14. Blur Tool	Softens or blurs specific areas of an image. It's often used to reduce noise or to soften backgrounds.
		15. Dodge Tool	Lightens areas of an image. The name comes from a traditional darkroom technique called "dodging" where you decrease the exposure in specific areas.
Drawing and Type Tools		16. Pen Tool	A vector-based tool for creating precise paths and shapes. It's used for drawing smooth lines and creating complex selections that are easy to edit.
		17. Horizontal Type Tool	Creates text on your image. When you click, it adds a new text layer that you can type into.
		18. Path Selection Tool	Used to select and move vector paths and shapes created with the Pen or Shape tools.
		19. Rectangle Tool	Creates a vector-based rectangle or square. This is a shape tool, so the output is a vector shape layer, not a rasterized selection like the Rectangular Marquee Tool.
Navigation Tools		20. Hand Tool	Used to pan or navigate around a canvas. When your image is zoomed in and not fully visible, you can click and drag with this tool to move the view.
		21. Zoom Tool	Lets you zoom in and out of the image. You can click to zoom in or hold down the 'Alt' key and click to zoom out.

2. ANATOMY OF A TYPEFACE. Instructions: Search of the definition, meanings or function of each anatomy of a type.

Typeface Part	Definition/function
1. Apex	The sharp peak at the top of a character where two strokes meet
2. Ascender	The upward-extending stroke on a lowercase letter that rises above the main body of the letters, as seen in 'b', 'd', 'h', and 'l'.
3. Ascender height/topline	The imaginary horizontal line that marks the top limit for all the ascenders in a font.
4. Bar	The horizontal stroke that connects two parts of a letter, such as the middle line in 'A' or 'H', or the cross-stroke on an 'e' or 't'.
5. Baseline	The invisible line upon which the characters of a typeface sit, serving as a foundational guide for alignment.
6. Bowl	A rounded stroke that creates an enclosed space within a letter, for instance, the curved part of a 'D' or 'b'.
7. Cap Height	The height from the baseline to the top of a capital letter, which defines the upper boundary for uppercase characters.
8. Counter	The completely or partially enclosed empty space within a letter, like the hole in an 'o' or the inner spaces of 'B' and 'A'.
9. Descender	The part of a lowercase letter that falls below the baseline, as is the case with 'g', 'p', 'q', and 'y'.
10. Descender line (beardline)	The imaginary horizontal line that sets the lowest point for a typeface's descenders.
11. Ear	A small, decorative stroke that extends from the upper right side of the bowl of a lowercase 'g', resembling an ear.
12. Finial	The end of a stroke that tapers or curves to a point, often seen on characters like 'c' or 'e'.
13. Leading	The vertical spacing between lines of text, which controls the density and readability of a block of copy.
14. Loop	The lower portion of a lowercase 'g', which forms an enclosed or partially enclosed shape below the baseline.
15. Open-counter	The partially enclosed space within letters like 'c' and 'e' that doesn't form a full loop.
16. Serif	The small feet or finishing strokes at the end of a character's main strokes. Fonts can be classified as either serif (with these strokes) or sans-serif (without them).
17. Shoulder	A curved stroke that branches off from a main stem, as seen in the top part of 'h' or 'n'.
18. Stem	The primary vertical or diagonal stroke of a letter, like the vertical line in a 'b' or 't'.
19. Tail	The decorative, often curved or descending stroke on a letter, for example, the descending part of a 'Q' or 'j'.
20. X-height	The height of the lowercase 'x', which establishes the height for most of the lowercase letters that don't have ascenders or descenders.

3. Font Comparison Table. Instructions: In the table below, pick five (5) different fonts - type it after the Genre provided (replace the “??” with the name of your chosen font style). Compare them when they are bold, italic and underlined. The fonts you choose must reflect / fit well with the Genre of shows listed below. You may download other custom fonts from the internet if you so choose. (Fonts not allowed for this activity: Cambria, Callibri, Times New Roman)

Genre	Bold Font	Italic Font	Underline Font
1. Horror - Chiller	Chiller	<i>Chiller</i>	<u>Chiller</u>

2. Romance - Garamond	Garamond	<i>Garamond</i>	<u>Garamond</u>
3. Comedy - Impact	- Impact	- <i>Impact</i>	- <u>Impact</u>
4. Science Fiction - Century Gothic	- Century Gothic	- <i>Century Gothic</i>	- <i>Century Gothic</i>
5. Documentary - Arial	Arial	<i>Arial</i>	<u>Arial</u>

When you are done with this activity save the file in this naming format “Lastname fonts.pdf”. Make sure to save as pdf for the font styles to remain intact. End--
